```
pipeline {

    agent any  // Use any available agent (node) for running the pipeline

    stages {

        stage('Print Message') {

            steps {

                echo 'Hello, Jenkins!'

            }

        }

    }

}
```

Ex#2:

```
pipeline {

    agent any  // Use any available agent (node) for running the pipeline

    stages {

        stage('Create Directory') {

            steps {

                // Use the 'bat' step to execute a Windows command

                //bat 'mkdir C:\\ProgramData\\Jenkins\\.jenkins\\workspace\\ff

                bat 'dir C:\\ProgramData\\Jenkins\\.jenkins\\workspace'

            }

        }

    }

}
```

Ex#3

```
pipeline {
    agent any

    stages {
        stage('Hello') {
            steps {
                // Print "Hello, world!" using echo command
                bat 'echo Hello, world!'
            }
        }
    }

    post {
        success {
            echo 'Pipeline succeeded! Hello, world!'
        }
        failure {
            echo 'Pipeline failed! Hello, world!'
        }
    }
}
```
